# Solving a Partial Differential Equation

Mathematical Institute

When solving a partial differential equation the following macro steps can be identified:

- Geometrical modelling,
- Meshing,
- Discretising a PDE,
- Solving the linear or nonlinear system.

We aim to allow the Firedrake user to do all the steps above described in a single script.

# Why NetGen?

NetGen is an advancing front 2D/3D-mesh generator, with many interesting features. Among the most important:

- Python wrapping (through pybind11),
- Multiple ways of describing the geometry to be meshed, i.e. its builtin **Constructive Solid Geometry** (**CSG**) and the **Open Cascade Technology** (**OCCT**) geometry kernel,
- Supports mesh refinement (also anisotropic mesh refinement).

# Getting Started – Installing NetGen

UNIVERSITY OF OXFORD
Mathematical Institute

## Install NetGen using Firedrake scripts

```
python3 firedrake-install --netgen
python3 firedrake-update --netgen
```

## PETSc

If you are using an external PETSc installation, it should be updated to include commit 654059db.

## NetGen

If installing from scratch, use the NetGen fork from the Firdrake project GitHub.

# Getting Started – Unstructed Mesh

UNIVERSITY OF OXFORD
Mathematical Institute

```
from firedrake import *
from mpi4py import MPI
from netgen.geom2d import SplineGeometry
import netgen
comm = MPI.COMM_WORLD
if comm.rank == 0:
    geo = SplineGeometry()
    geo.AddRectangle((0, 0), (pi, pi), bc="rect")
    ngmesh = geo.GenerateMesh(maxh=0.1)
    labels = ngmesh.GetBCIDs("rect")
else:
    ngmesh = netgen.libngpy._meshing.Mesh(2)
    labels = None
labels = comm.bcast(labels, root=0)
msh = Mesh(ngmesh)
File("VTK/Poisson2DMesh.pvd").write(msh)
```

# Getting Started – Unstructed Mesh

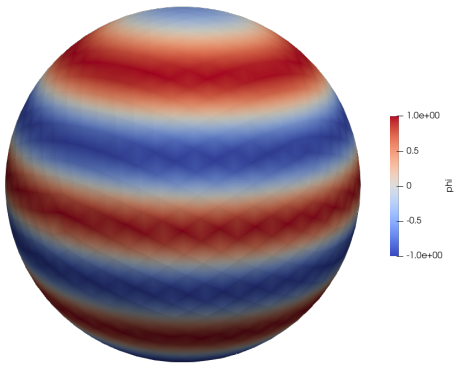
       MESHSURFACE)
9  ngmesh = geo.GenerateMesh(mp=mp)
10 msh = Mesh(ngmesh)
```



# The Open Cascade Technology Kernel

UNIVERSITY OF OXFORD
Mathematical Institute

- Basic OCCT objects can be used in NetGen such as: `Box`, `Cylinder`, `Point`, `Segment` and `ArcOfCircle`.
- The `fuse`, `cut` and `common` operations between OCCT objects have been wrapped in NetGen.
- Transformation operations such as `Move` and `Rotate` have also been wrapped into NetGen.

# Conclusion

UNIVERSITY OF OXFORD
Mathematical Institute

- Mesh **hierarchy awareness**, using Firedrake `HierarchyBase` class.
- Make the implementation works in **complex** arithmetic.
- Support for **anisotropic** mesh refinement, using NetGen `ZRefinement` and `HPRefinement` methods.
- Support for NetGen **high order** mesh in Firedrake.
- Support for MFEM **GLVIS** mesh and solution live display, thanks to PETSc-GLVIS interface.
